Example Retail Ltd: conversion by business area

Each area is signed off on its own.

Area	Converted	With us	Manual
Catalogue	0	0	1
Finance	1	0	0
Pricing	0	1	0
Sales	1	2	1

Catalogue

What it does	Status	In plain words
Searches product descriptions. dbo.uspSearchProducts	**Contains manual work**	Full-text search (CONTAINS) is not supported on Databricks.

Sign-off for the Catalogue area

Name	Role	Date	Signature
	Client		
	Delivery lead		

Finance

What it does	Status	In plain words
Monthly revenue per region. sales.vMonthlyRevenue	**Converted**	In the original, monthly totals do not add up to the yearly total when an order is refunded in a later month. The conversion reproduces this.

	Client		
	Delivery lead		

Pricing

What it does	Status	In plain words

Applies a staged price list to the product table. ref.uspApplyPriceImport	**Failed final validation**	We are fixing these. Nothing is needed from you.

Sales

What it does	Status	In plain words
Creates an order with its lines and reduces stock. sales.uspCreateOrder	**Converted**	Ready to use. Converted code behaved exactly like the original on every test.
Moves orders older than a cut-off date into the archive tables. sales.uspArchiveOrders	**Failed: completeness**	3 rows that should have been archived were left behind.
Summarises an order for the confirmation e-mail. sales.uspOrderSummary	**Blocked by sales.uspArchiveOrders**	These depend on an item above and are checked once it is fixed.
Nightly load of the day's sales from the till system. LoadDailySales.dtsx	**Recognised, not converted**	SSIS packages are recognised and listed, not converted, in v1.

What we need from you

- **Extract the database ArchiveDB.** 2 procedures read it; extracting it would make them reconcilable.
- **Export identity starting values at cutover.** Needed so new order numbers continue from the live system's, not from the highest number in the data.

Condition for all converted code: During a run, converted code is the only writer to the tables it writes. Emulated transactions, identity values and constraint checks are correct only while this holds.
